

6. (amended) The image display device according to claims 1 or 2, wherein the light valve is an active matrix type liquid crystal display device.

---

11. (amended) The image display device according to claim 1, wherein a display mode of the liquid crystal is an inplane switching mode.

12. (amended) The image display device according to claim 1, wherein each of the light sources is a laser light source or an emission diode.

13. (amended) The image display device according to claim 1, wherein each of the light sources is a light source that uses an emission generated by irradiating a fluorescent material with ultraviolet rays.

14. (amended) The image display device according to claim 1, wherein a spectral wavelength or a spectral distribution of each of the light sources to be used for image display is controlled based on instructions from a viewer of the image display device, light source information on a location where an image is captured, instructions from a creator of the image, or light source information on a location where the image display device is viewed.
